```java
import java.util.*;

public class ArrayListDemo {

    public static void main(String[] args) {
        ArrayList name = new ArrayList();
        name.add("Ankita");
        name.add("Sharvari");
        name.add("Sakshi");
        name.add("Prachi");
         System.out.println(name);

         LinkedList number = new LinkedList();
         number.add(12);
         number.add(13);
         number.add(14);
         number.add(15);
         System.out.println(number);

         name.addAll(number);
         System.out.println(name);

         name.remove(3);
         name.remove(5);
         System.out.println(name);

         //name.retainAll(number);
         //System.out.println(name);
```

```java
        name.remove(5);
        System.out.println("name is "+" "+name);

        name.clear();
        System.out.println(name);

    }

}
```
